The glorious planet ☿ from the 28 of June in the last year to the 19 of Apr. this year is our bright evening star and may be seene in the W. after sunset. But from thence to the 6 of Febr. 1647 she is to be seene in the E. before sun rise & is our morning star, the 10 of Ianu. she is with the ☽, the 5 of Feb. this year she is in her greatest distance from the ☉, the 9 day she is againe with the ☽, the 24 day she is with ♄. The 10 of Mar. she is with the ☽ againe, the 29 day she becomes retrograde. The 7 of Apr. she and the ☽ meet ☿ being 11 degrees above the ☽: The 17 & 18 day she and ♄ are both made orientall or morning stars. The 3 of may she is with the ☽, and so againe the last day the ☽ is neat her ♂ and ♄. The 9 of June she makes a 3. conjunction with ♄ on midsomerday she passeth by the 7 starrs, the 29 of June the ☽ is betweene ♂ & her. The 28 of July she is againe with the ☽. The 21 of Aug. the bright planet ♃ is one degree above her. The 27 day the ☽ is betweene them two. The 26 of Sep. she is with the ☽ againe. The 26 of Octo. the ☽ meets her neer Spica ♍: And the 25 dayes of Novem. and December the ☽ and she are in conjunction.

King Charles began his raigne over great Britaine the 27 of Mar. 1625 It being 21 yeers compleate the 26 of Mar. this year. vivat Rex. *Take away the wicked from before the King and his throne shall be established in righteousnesse* Proverbs 25. 5.

PARLIAMENT

31	25		24		26		29	1		3		5	31

An abstract of the Tide-table, wherein the age of the moon every day is found, with the hour & minutes of full sea at London-bridge, for every day in the year.

The age of the Moone	increaseth	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
	decreaseth	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
Full Sea at London,	hower	3	4	5	6	7	7	8	9	10	11	11	12	1	2	3
	minute	48	36	24	12	0	48	36	24	12	0	48	36	24	12	0

The use of this table is thus, look for the day of the moneth on the other page on your left hand, and just against that day of the moneth is the age of the moon, now if you would know at what time of that day it will be full sea or high water at London bridge, &c. Seek that age of the moon in this little Table above, & right under it is the ho. and min. of high water there. As for example, on Thursday being the 1 day of Jan. this year I finde the moones age to be 24, this number I seek in this Table & under it is 10 howers 12 minutes, that is to say, it is high water the 1 of Jan. this year at 10 of the clock & 12 min. at London bridge & all other places that are joyned with it as in the Tide table appeareth. You must know that every 12 ho. it is high water at any of those places, so that if the said 1 of Jan. it be high water at 10 of the clock & 12 min. in the forenoon, it will be high water againe 12 how after that, that is to say at 10 of the clock & 12 min. in the night, and yet you must note that every Tide alters 24 min. of time, so that one tide is later then another by 24. min. of time, by which meanes the said 1 day of Jan. if you ad 24. min. to 10 of the clock & 12 min. in the forenoon it will be 10 of the clock & 36 min. in the night before it will be high water againe there, &c. Thus if you doe with any other place mentioned in the Tide table you may frame a particular one for the same, and it is easy that unlesse you be wilfully ignorant you will need no further directions

Obserue that in some monethes the moon hath but 29 dayes & then she doth increase but 14 dayes & a halfe, & decreaseth as much, but in some other moneths she hath 30 dayes, & then she increaseth 15 dayes & decreaseth 15 dayes. Note generally that it floweth one point of the compasse more in the spring tides, that is, at the new & full moones then it doth at the neape tides, that is at the 1 & last & quarter of the moon, especially if it be a river where there is any indraught, & of much distance from the sea, yea when there is neither rage of winds, landflouds, nor other cause to produce or hinder the said effects. As for example, it is high water at London bridge at the new or full moon when she is SVV. or NE. But in the quarters of the moon, it scarcely floweth there when the moon is SVV. by S. or NE. by N. And by reason of the many Arches that London-Bridge standeth on it floweth slow, & ebbs by causing the Tide to differ or be sooner an hower then this table sheweth in the full sea, though at most other places it is 6 ho. floods & 6 ebbs. Note that by this meanes you may perceive that the 1 of Jan. this year, the tide turnes & flowes westward about 5 of the cloth in the morne at London bridge & so continueth till 12 min. past 10 in the forenoon, after which time it returnes to the sea eastward againe, which is necessary to be knowne by those whose occations are much time, For Time and Tide stayes for no man.

January hath xxxj Dayes.

The accidents and ills of the yeare

When *Iove* in Cancer, *Mars* in Aries
Grow strong and potent, it will much displease
The *Taurists*, though their friēds be great though
Conjoyne with *Saturne*, *Venus*, *Hermes*; All (*Sol*
Their helpe's invalide, for the Stars do threate
With famine, fire, plague, sword, that folk to beat

The fixed accidents in the yeare 1724

The place of the planets every 5 day at noone.

This pleasant Moneth Heaven smiles, the Aire is
From noysom vapours, benign Stars appear, (cleer
And powre their influence in plenteous sort
On us, and ours, let us be thankfull for't.
Those sorrowing days in which we lately mourn'd
Into rejoycings will ere long be turn'd.

The place of the planets every 5 dayes at noon.

The accompt of new ſtile at beyond Sea

Now ſuperſtition tumbles down apace,
And Sects, and Separatiſts are in diſgrace,
The Formaliſts and thoſe that do *Depend*,
Or *Independ* on them, muſt now amend.
Saturn is ſad, and angry *Mars* diſpleas'd,
To ſee *Religion* and her *Patrons* rais'd.

The true accompt

UMI

Jove mounts aloft with *Sol* and *Mercury*,
And wholsome gales the Aire do purifie.
The Dog-star bites not, yet he opes his mouth,
And suffocating *Windes* blow from the *South*.
This month ends with the *Sun* & *Saturn* squaring
Sayes rain, and cooler weather is preparing.

The place of the planets every 5 dayes at noon.

The accompt or new stile us'd beyond sea

The midst of *Taurus* in the midst of heaven,
Possest by *Saturn*, worst of all the seaven,
At such a moment when as Kingly *Sol*,
Attaines to *Libra*, which is term'd his fall,
Speaks sad effects to some (brings cold dark aire,)
He is no mean man that must have his share.

The true accompt to the year 1734

The accompt of new stile is 11 dayes before the old.

Saturn and *Mars*, are now at deadly feud
With one another: This malignant, rude,
Ungodly Crew are to confusion brought,
If wee unite, their Counsells come to nought.
Jove, *Mars*, and *Hermes* opposite, do raise
Tempestuous windes, God bless our ships at Seas.

The true Accompt of the year 1716.

The place of the planets every 5 dayes at noon.

1647.

1647 Jan.

Thus we are form'd, Head, Neck, Arms, Breast, Heart, Wombe, Loynes, Secrets, Thighs, Knees, Legges, Feet, Earth's our Tombe.

The Twelve Signes, Verse.

Ar. Tau. Gem. Can. Le. Virg. Lib. Scor. Sag. Cap. Aquar. Pis.

♈. ♉. ♊. ♋. ♌. ♍. ♎. ♏. ♐. ♑. ♒. ♓.

Sex in lacte dies, Ter sunt in sanguine trini,
Bis sens carnem, Ter seni membra figurant.

The first six dayes, like milk, the fruitfull seed
Injected in the wombe, remaineth still;
Then other nine, of milk, red blood do breed,
Twelve dayes turn blood to flesh, by Natures skill;
Twice nine forme parts, the rest ripe birth do make,
Such shape and forme, in time, man doth partake.

Astrologers do attribute the first moneth after the Conception to the Planet *Saturn*, by whose influence the Seed in the Womb is retained and fastned: The second moneth is given to *Jupiter*, who gives increase to the Seed, and layes the foundations of the Senses and Intellects. The third moneth is proper to *Mars*, who addes heat unto the Infant, and prepares it for motion. The fourth moneth the *Sun* challengeth as the Author & moderator of the vitall Spirits. The fifth moneth is given to *Venus*, who is significatrix of comlinesse and beauty. The sixth moneth is appropriated to *Mercury*, by vertue of whom, the members of the young childe which were connexed, are now separated and distinguished. The seventh moneth is bestowed upon the *Moon*, who compleates the Childe in the womb, makes it perfect, filling up the clefts, rifts, and crannies in the body, opening the passages by which it is brought forth to light. They that are born in this moneth may live by reason of the complement, or fulfilling of the Planetary motions. But if it happen one to be born in the eight moneth, they are most part either born dead, or live but a short time, by reason the disposition is returned to *Saturn* again, who is an enemy to Nature, in all his qualities: And therefore the most frequent and natural birth of man is deferred to the ninth month. In which time the benevolent Planet *Jupiter* takes the government again upon him: In which perfect birth the *Moon* returns to the signe Ascending at the time of Conception, or to the opposite thereof, or to the Planet with whom she was in the conception, or his Aspect, or to the Sign wherein she was then, and look in what Sign the *Moon* was in at the birth, the same Sign was Ascendant at the conception. And that Sign she was in at the conception, either that or the opposite is the Ascendant at the Birth. *Ptolom. Propos. 52. Centilog.*

The seven Planets, Verse.

♄.	♃.	♂.	☉.	♀.	☿.	☽.
Sunt Sept, Sat,	*Iup.*	*Mars.*	*Sol,*	*Ven.*	*Merc.*	*Luna.* *Planetæ.*

EX Astru tibi sors, tibi mors, tibi Vitaque manat,
Corpore cumque tuo Cœlestia signa residunt.
Et quamquàm variis glomeratibus Astra rotentur,
Temporibusq; suis: Deus hac ratione gubernat,
Humanasque vices, Cœlum, Stellasq; Vagantes,
Ordine perpetuo jussit servare mecatu.

An Explanation of the severall parts of the ALMANACK for this Yeare.

IN the first Columne is the dayes of the moneth.

The second to the dayes of the weeke D being Sunday Letter in the Julian or our English Accompt.

The third is some remarkable dayes as yet used in England the popish Saints dayes being wholy left out as superstitious & unprofitable, though Wharton of Oxford tayes the markets & tayres by them are distinguished, & the dates of old evidences discovered, when as in truth, the day of the moneth will do it better; for those dayes are now made moveable and sent parting out of England. There is likewise in that Columne the places of the Planets, the Moons meeting with them, and their latitudes, &c.

The fourth is the Moons place (by the vulgar people called the Signe) or the signe and degree she is in every day at noon.

The fifth the houre & minute of Sun rising at London, which if you double, you shall have the length of the night.

If you substract the Sun rising from 12 the remainder will be Sun set.

If you double the houres and minutes of Sun-set, you will have the length of the day.

Observe that 60 minutes make an hour. And

As many minutes as the Sun riseth before, 4.5.6.7.8.9 } A clock.
So many minutes he sets after 8.7.6.5.4.3 }

The first Columne is the disposition of the Aire, the Aspects and configurations of the Planets to the Moon, and amongst themselves, together with their sympathicall effects: Note that the letter (a) after the time of such aspect stands for afternoone. (b) before noon. (m) morning, and (n) for night.

On the other side or right hand page is the Forrein Accompt, being ten dayes before, and in that respect truer then ours, to which is joyned an assay of the true Accompt being 13 dayes almost before our Accompt, and indeed should so be. For in every 134 yeares the Æquinoxes and Solstices doe anticipate 24 houres 6 minutes, and 52 seconds. So that in 1646 yeares, the space of time since the birth of Christ, there are 12 dayes, 8 hours, 13 minutes, and 58 seconds gone back.

In the blank page is a Table for the motion and place of the Planets for every 5 dayes in each moneth: wherein you must note that (dir.) stands for a Planet when he is direct in motion & goeth according to the succession of the signes. And (ret.) is when a Planet moveth retrograde against the course of the Signes. Of which you shall learn more

The fourth perpetuall Table shewing the Signe and degree thereof that shalbe in the mid-heaven and the Horoscope every houre of the day and night for every ten degrees the Sun shalbe in these following signes in the Latitude of the City of London 51 deg. 32 Minutes.

March Sunne in *Aries* 10 day										*April* Sunne in *Taurus* 10 day.										*May* Sun in *Gemini* 11 day.

THe vse of the foregoing Table is fitted for every houre of the day throughout the yeare, to know what Signe and Degree thereof shall be in the South or mid-heaven, and what Signe and Degree shall be in the East or Horoscope; for every 15 degrees the Sun shall be in, in any of the 12 Signes of the Zodiake, which an ingenious practitioner may proportion out to any other time, to his great delight and content. For in a moment of time, you shall by help of this Table at any time behold the position of the Signes and Planets, whereby they may be knowne, &c. It is of more vse than at present can be demonstrated. And therefore I will set downe an example or two, and leave the rest to be practised by those that take pleasure in this excellent learning. There is a Columne which hath this Title (Houres after noone) it begins with (0) which is noone, and endeth with 23 houres. For Astronomers begin at the noon of one day and end with the noone of the next following day, and they call one a clocke in the morning, the 13 houre, 2 clock in the morning is the 14 houre, &c. And so to 24 houres.

By helpe of this little Columne you shall easily learne the vse of the Table. As for example. I would know what Signe and Degree will be in the South or mid. heaven, and the East or Horoscope, the 10th day of March this yeare, at sun rising, or 6 a clocke in the morning. The 10th of March the sun is in 0 degree of ♈, which I looke under Title degree 0. And over against the houre 18, which is 6 a clocke in the morning, you shall finde under MH, which two letters signifie mid-heaven, 0♑, which is 0 deg: of Capricorne, and under Hort which signifie Horoscope, you finde 0♈ which is 0 deg. of Aries. Now the opposite part of Heaven are known by their opposite signes and degrees. The West is opposite to the East, and the North to the South.

The opposite signes are thus.

♈ ♉ ♊ ♋ ♌ ♍.

is opposite to

♎ ♏ ♐ ♑ ♒ ♓.

And the opposite houses of Heaven are thus.

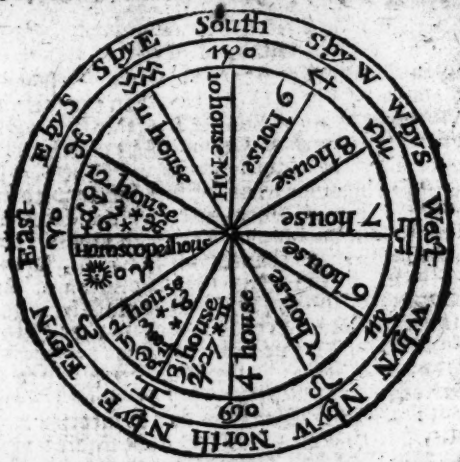
1 2 3 4 5 6 House

is opposite to the

7 8 9 10 11 12 House.

Now

Now for the sayd tenth of March this yeare, if you will draw such a figure as followeth for 6. of the clocke in the morning, it will represent the face of the Heavnes on this wise.



In the blanck page of the Almanack for this yeare, I shall set down the places of the Plannets for every 5. dayes in each mone th of the yeare, which by proportion may easily be found for any other day at Noone. As for example, The first day of Ianuary I finde ♄ to be in 27. deg. 48. minutes of ♈, and the 6th day in 27 deg. 58 minutes, which is 10 minutes in 5 dayes for the motion of ♄, which is every day 2 minutes; So that if I adde 2 minutes to the place of ♄: for the 2 day it will produce 27 deg. and 50 minutes of ♈ for the place of ♄ the 2 day of Ianuary this yeare at noone. Do this with the difference of any other 5 dayes of him or any other Planner, and you shall come very neere the true place, which will serve as an *Ephemeris*, and is very usefull for such who want other helps and Tables. Observe that (*Dir*) stands for *Direct*, wherein the difference of motion is to be added by addition of the precedent dayes to the subsequent. And (*Ret*) is when a planner is retrograde. In which you must substract the motion following from the preceding. And by this manner you may finde very neere the true place of any planner any day of the yeare. I would have exemplified, but the thing of it selfe is so easie, that I have forborne, presuming the ingenious will make use of my endeavours, and thanke mee. But for the ignorant I pitty. The selfe-willed, obstinate, censorious Critick, I valew not. I confesse this way of drawing a Scheme is very short of that which is done from the Domificing Tables. But by this meanes you may presently any houre of the day or night finde in what quarter of Heaven any of the planners are, which how pleasant it is, I leave to those who take delight herein.

Of the foure seasons of the Yeare.

Of the Spring.

The Spring commenceth this yeare on Tuesday the 10th day of March, iust at 9 of the clocke in the forenoone. At which time the benigne Planet Iupiter is in the Ascendant or Horoscope in 27 degrees of Gemini. The mid-heaven is possessed by bloudy Mars, and subtile Mercury. The Sun is in the 11th House; and the Moone having bin lately with malicious Saturne, Lord of the Regall place, which culminates this quarter is in Coniunction with Venus in the 12th House. Haly in his seventh Booke and eighth chapter fol. 370 mihi, sayes; If Iupiter shall be in the Ascendant in the revolution of any yeare, strong and fortunate, and the Lord of the place he is in shall behold him; it demonstrates that the men in that Climate shall have good fortune, and gaine from all sides health in their bodies, much ioy; and that good shall happen chiefly to good and religious persons, and that they shall be honoured and had in great esteeme: and that Churches and Oratories shall be edified and built, and that men shall leeke the studies of wisdome and Lawes. But if he shall be unfortunate, he signifies losse of substance, filthinesse, uncleannesse, corruption by Bribery, and that men will not bestow Almes, nor contribute to publique Edifices, but with great difficulty, Et quod Reges plus de suis quam populi commodis curent solicite. It is true, Iupiter is in his Detriment, but he is direct in motion, and free from all other impediments, he is in reception with Mercury, from one anothers House. And in the beginning of Aprill, he enters his exaltation, wherein he is exceedingly fortified. The Ascendant and the Moone are generall significators of the Common-wealth and people. The Ascendant we see is fortunated by the presence of Iupiter, and the Moone is but little inferiour; for she is in Taurus in her exaltation seperated from malignant Saturne, and in coniunction to benevolent Venus. The state of the people is signified to be fortunate, there shall be much ioy and reioycing. Venus in the 12th House doth signifie that Odio habebunt viri mulieres, vilipendent eas, & dominandi Licentiam illis adiment. And the Moone in the 12th House doth prenostrate much strife and quarrellings to happen to the people of that Climate, signified by the signe she is in, and that is Taurus. Now under that signe are Russia, Polonia, Swethland, Lorraigne, Ireland, &c. The state of things considered, I believe will answer to the Celestiall position, which significations are much augmented by the unfortunate placing of Saturne in the 12th House in Taurus, Mars in

in the 10. Significat quod erunt Reges & Domini pravi & mali Gentis & faciunt eis malum sine ulla pietate, nec memores erunt mercedis eorum, & interficiunt, & spoliabunt, & accipient tributa sine justitia et ratione. Mercury being in coniunction with Mars, signifies much treachery, deceipt, and counterfeiting of Coyne. Et quod homines tradent se Alchymæ ac omni operi ac magisterio quod fit per ignem.

In this Quarter there happen these notable Coniunctions and Aspects. Aprill the 12 day ☌ ♄ ☿ in 7 deg. of Taurus. The 17 day a Quartile of Iupiter and Mars, ♈ in the beginning of ♋ and ♎ in the beginning of Aries, at which time the Moone is in a quadrate Aspect to Iupiter, but oppolite to Mars. The same day Saturne and the Sunne are in coniunction. The next day the Sunne and Venus; the next day after that, Saturne is with Venus in the 8 degree of Taurus, all of them opposed by the moone (the Significatrix of the common people.) Certainly about these times there will be much stirring, much action, great preparations for some notable designe. Ireland is remembred, and the innocent bloud that hath bin shed by that wicked Nation will be revenged, and the Authors of this horrible Warre will not escape unpunished. I could say much in this perticular, but this Volume will not admit of it.

Of the Summer.

SUmmer begins when the Sunne enters the first minute of Cancer, which this yeare is on Thursday the 11th of Iune, a quarter past Noone: at which time the auspicious and fortunate Iupiter is in his exaltation in midole of Heaven, the South Angle. The Moone is in the Ascendant with Spica Virginis, in square to Iupiter, and a Trine to Mercury, who is excellently well placed. (Walter Wharton) in the 9th House in his owne house, in Gemini, the Title of London Signe (Walter Naworth) he is upon the point of direction. As for Mars and Saturne they are both together in the 8 House, the House of death, in the middle of Taurus (Ireland) Venus seperates from them, and the moone hastens to oppose them, which happens on the 13 day of this Moneth; and on the 19 day, there is a hopefull Sextile of Iupiter, in the very deg. of his exaltation to Saturne. Truly Walter Wharton, or Naworth, or Noworth altogether, this position is very fatall to you and your party. Be your selfe Iudge, when Saturne and Mars are in coniunction in the 8 house in Taurus, the Signe that governs the beloved Irish, his Majesties Catholike Subiects, what thinke you of them? If you your selfe have that deg. in your Horoscope, in the Radix of your nativity, &c. it will prove very fatall to you, it behoves you to

to looke about you; and thole Great ones wholoever they be, that have the middle of Taurus culminating, had need beware, they are neere an eminent danger, (who they be) I way not as you M. Wharton did in your Gnathonical iudgment when hee made vle of Cardanus Rule in that of his, De modo servando in prædicendo; Principi ne magnum malum firmiter unquam prædixeris, sed periculum; This hee said in the Epistle before his Astrological iudgement, upon his Maiesties present March, when he went in May, on the 7 day, wherein he sayes it was in hora ♂; Haly sayes hora ♂ abhorrenda est in omni re et initio et facto, and yet from thence hee promised Victory upon victory, and nothing but victory to his Maiesty, and his party; when as in truth nothing but infinite losse hath happened to him ever since. The notable victory (our english Gideon) obtained by the Parliaments Generall Sir Thomas Fairfax against the Kings forces, where he was master of the horse, Generall of the ordnance, and keeper of the Kings Cabinet of Leeters in one day, (which he lost at Nasby field) a Jewell of inestimable price, The regaining of Leicester, the relieving of Taunton, the famous Barkell of Langport, the recovery of Bridgewater, Pontefract, Scarborough, and many other places of great strength, and all within fire weeks space; dost sufficiently evidence how weake and invalide his iudgment was in Astrology. Had not he bin better to have dealt ingenuously with the King, and told him his danger in fighting against his People, his Parliament which was called by himselfe, and I hope will continue till that happy Reformation in Church and Common-wealth be finished, which is now God be thanked in a faire progresse. I should have bin a little eager in answer to this Bifrons, but it hath bin done already by my friend Master Lilly, in his Postscript to his starry Messenger, and therefore I forbeare him; onely I cannot but laugh at the ignorance of the fellow, who makes vle of an elected time, or it may be an accidentall time, and from thence most falsly gives iudgement of the successe of a Journey, or March, and to the King himselfe, censuring Master Lilly and my selfe, and accusing us of that which is false and scandalous. Certainly if there be any truth in Astrology concerning the affaires of men; it rather depends upon Nativities, Quarterlie, Ingresses, Lunations, Eclipses, &c. then upon Horary questions, or Elections, though both of them are of excellent vse with an able Artist; not such a one as this Astrologaze-starre Master Wharton, who hath proved himselfe, Spurius et non verus filius Artis, his owne words, Astrologi boni est plurimas habere insignium virorum genituras, As of Princes, Dukes, Earles, Nobles, Divines, Counsellours, Physicians. Non enim magna illum modo laus est, priori consulta experientia de ipsis in specie aliquid dicere, sed publica quoque

que

que fata ex eorum salute pendent. Quicquid enim deliranr Reges plectuntur Achivi. I have gone a little by the way, and therefore I will leave him Nam qui tangit picem, inquinabitur. I come now to some other observations in this Summer Quarter, as that Iupiter in the regall House the mid Heaven exceeding well placed in his Exaltation, Erunt iustitiæ communiter in omnibus hominibus, illius climatis et habebunt honorem et mercedem et pietatem a suis Regibus et dominis et lucrabuntur cum ipsis, ac eis facient utilitatem. And indeed this present Sextile of Saturne and Iupiter, gives great hope of a happy proceeding in reforming Religion and Church-government. The single position of either Saturne or Mars in the 8 House, doth signifie much bloudshed, Death, Famine, &c. Haly sayes in part. 8. cap. 23. Si quando Mars iunctus fuerit cum Saturno, struet quilibet alteri fraudes, et deceptiones, et erunt inter homines percussiones, et vulnera, etiam a vider Regi impedimentum, et labor ad homine qui est de terra participationis illius signi in quo iunguntur, In plain English, it threatneth much mischiefe and misery to happen to Ireland, and the abhominable bloud-thirsty Rebells there, and other places under Taurus, Famine, Fire, Plague, Sword, and what not. The Moone in the Attendant of the Summer Quarter fortuned by a trine of Mercury from the 9 House, doth signifie a happy and prosperous yeare, for the most part to mankinde, in respect of health and those things, therefore requisite. Besides Mercury in the 9th in Gemini; Fortunat Itinera et profectiones, excitaque amorem erga studia legum, et aliarum scientiarum, &c. I could say much more concerning this Quarter, in which time the effects of the late Eclipse of the Sun (which happened the 11 of August last 1645. about Noone) doth very strongly operate, but that you may read in W. Lillyes Starry Messenger, who is copious therein.

Of Harvest.

THe Autumne or Harvest, beginneth on Sunday the 13 day of September, at 53 minutes past 2 of the clocke in the morning, Venus being newly risen, and in exact Conjunction with the Royall Star Cor Leonis irradiated by a hatefull Quadrate of dismall Saturne out of the 10 House, who is in the very Culpe thereof. Truly this is a very bad position; For Saturne in the 10 House, *Si fuerit malefictus & infortunatus in alio Loco, et fuerit super omnes alios Planetas significat quod frigiditas & infortunium & malum eius supervenient generaliter per totam terram, et tunc Rex mutabitur de una domo in aliam, et faciet multum mali & multas collectas seu tributa imponet populo & facies ei quod iniquum.* This is Saturnes posture this Quarter, and it is Haly's Latine Master

What an,

Wharton. I pray get your fellow Iyar Aulcus to English it, and then I give your iudgement upon another March. *Cum Rex mutabitur de una domo in aliam.* Venus is very well placed neere the Cuspe of the Horoscope, which is partly the Significator of the people, and promiseth much ioy, health, and prosperity to happen to them. Iupiter this quarter is on the Cuspe of the 12 Houſe, fortunate and very strong. *Significat quod gentes illius Climatis habebunt utilitatem a suis inimicis, et Lucrabuntur in eis multum, et habebunt proprietates & lucra in occasione istis, et interficient omnes de armata Regis cogitationes de inimicis & rebus preteritis & in partibus de rerum preteritarum.* If this comes to paſſe, what will become of the remainder of the malignant and ungodly people of the Kingdome, &c.

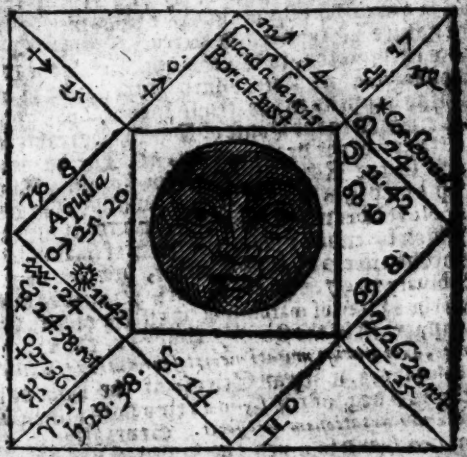
Of Winter.

WInter takes beginning on Friday the 11 day of December, halfe an houre paſt 2 a clocke in the Afternoone At which time the Moone in the Horoscope is oppoſite to Venus in the 7th Houſe, or angle of the weſt. Iupiter and Mars are neere one another in the North angle. Theſe two Planets are twice in Conjunction during this Winter, viz. on the 6th November, preceeding, and the 13 of January following. At which latter time the Sun is oppoſite to them, Mars being much elevated above Iupiter. There is likewiſe another great and terrible Configuration in the Next January 1647, which God willing in my next I ſhall have occaſion to mention. The preſent poſition of Iupiter and Mars in the 4 Houſe in a Fiery Signe, both ſignifie *multas Lites & percuſſiones, vulnera & placita accidens inter populares & mortalitates in terra climatis ſigni in quo iunguntur. Et erunt Beſtia magni valoris, et diverſi colores in aere apparebunt, et ſequuntur combuſtiones terrarum & Villarum multaque damna ex igne.* Truly this is like to be a ſad Winter, and much miſchiefe will happen therein; Saturne who is Lord of the 8, 9, 10, and 11 Houſes is extreamly ill pleaſed, and Retrograde in the moſt of the 12 Houſe, *Vbi provocat homines ad litigia & mutua odia damnaq; et infortunia inde enaſcitur.* Thus much for Winter.

Of Eclipſes.

THere will be Five Eclipſes this yeare, viz. Three of the Sun, and Two of the Moone. The firſt of the Moone, that will happen this yeare, will be conſpicuous only in Chriſtendom, but the reſt will be viſible in Forraigne and remote parts; I have here following ſet downe a Schrame of Heaven at the time of the Lunar Eclipſe which we ſhall ſee here in *England*,

The Poſition of the Heavens, on *Wedneſday* the 21th day of *January* this yeare, at the middle time of a totall Eclipſe of the Moone at *London*, 50 minutes paſt 5 of the Clock in the morning.



THe beginning of this Eclipſe happeneth on Wednesday morning 50 minutes paſt 3 of the clocke, the middle at 50 minutes paſt 5 of the clock, and the end at 7 of the cloche and 48 minutes; So that the whole duration will be within two minutes of 4 houres. The parts darkned, will be 17, and 25 Seconds, the Moone being in tenebris an houre and a halfe. The colour of the Eclipſe will be black, with ſome ruddy paleneſſe. At the beginning of this Eclipſe, the glorious Planet Jupiter, who is Lord of the Triplicity, and face of the Eclipſe is in the middle of the Weſt Angle, not any of the Planets but he being above the earth (to behold this ominous darkneſſe of the Moone.) And before the Moone come to her greateſt obſcurity, he as it were amazed at her, hides himſelfe in the weſt, for he ſets juſt at 5 of the clock in the morning. He being gone, the fiery Planet Mars takes the ſole dominion of this terrible Eclipſe upon him, as being Lord Paramount of the mid-heaven, and the Aſcendant at the middle time thereof. He riſeth 50 minutes paſt 6 of the clock in the morning, and ſheweth himſelfe to us above the Horizon; in the Eaſt very terrible, he is in Conjunction in reſpect of longitude with the Eagle or flying Vulture; A Star of the ſecond Magnitude and nature of ♃

was ♈, wch about the beginning of the Eclipse ascended the Horizon. At the middle of this Eclipse, there appeared in the very South two bright Stars, Lucida Lancis Australis of the second Magnitude of the nature of ♄ and ♂ in 10 deg. of ♍ And Lucida Lancis Borealis of the same Magnitude in 14 deg. of ♍ of the nature of Iupiter and Mercury. This 14 deg. of ♍ which now culminates, is directly opposite to the dismall Conjunction of Saturne and Mars, which happens the 12 of Iune next. This Eclips happens in the second face of *Leo*, and begins in the 8 House, which is the House of Death, Sorrow, hidden treasures, heritages of the dead, poyson, &c. In the very Cusp of this House is the Royall Starre Cor *Leonis*. The effects of this Eclipse do begin to apperate and worke the 13 day, or thereabouts of November next following, and continue in force 120. dayes, which is ended upon the 13 day of march 1647. The violence of the effects of this Eclipse, breake forth about the first of February 1647, and continueth 40 dayes, which end as before, on the 13 day of march. The effects of this Eclipse, because it happeneth in the 8 and 7 Houses of the Heaven, *Legum Institutiones, Sectarum; mutationes, et senectutis casus, seu mors senioribus*. Proclus sayes, when an Eclipse of the Moone happeneth in the second 10 deg. of the *Lyon* as this doth; then *Regis iter ad Aliquam Rerum mutationem accesserit*. Generally the Moone Eclipsed in *Leo* (and so much the worse, when bloudy Mars is chiefe ruler therein) doth portend *Armentorum pecudumque interitus, magni Regis seu Principis exitia, Carceres, aut internecionem inter plebeios, et potentiores, Odia mutua simultates, dissidia, magni exercitus motus, Bella horrida, Hominum strages, Incendia, Furta, Rapinas, ac Depopulationes, Abortus pragnantium, acutas febres, Epidemiam ab aëris malignitate, et Caumata frugum, sterilitatem, et Annonæ penuriam In Regionibus præcipue quæ Eclipsis signo subiiciuntur excellentem constitutionem*. I have beene bolde to interpret this heape of mischiefes impending over us and many parts of the World, during the Influence of this dire Eclips, by the blacknesse of a Cloud you may iudge of the ensuing storme. If VVharton, Naworth or Aulicus of Oxford chance to read this, they will say there was no such Eclipse, because they dare not give you the true sense of this Latine into English. I will onely notifie the places subiect to this Eclipse, and they are as followeth.

The places under the fiery Tripticitie are most subject to this Eclipse, viz. *Aries*, *Leo*, and *Sagitary*. And wee must consider chiefly the second Quadrangle of Heaven, which is *Taurus*, *Leo*, *Scorpio*, and *Aquarius*. Now the places under these Signes are thus.

Under

Vnder ♉ *Taurus*, of Countries.

Russia, *Polonia*, *Swetbland* the Noth part, *Ireland*, *Lorraigne*, *Campania*, *Helvetia*, *Swevia*, *Franconia*, &c. Of Cities, *Bononia*, *Sena*, *Mantua*, *Tarentum*, *Panerme* in *Scicily Tigure*, *Carelstade*, *Novograde*, &c.

Countries under ♌ *Leo*.

Gallia Togata, the *Alpes*, *Italy*, *Sicily*, *Apulia*, *Bohemia*, part of *Turkey*, &c. Of Cities, *Rome*, *Damascus*, *Ravenna*, *Prague*.

Countries under ♏ *Scorpio*.

Norway, the upper *Bavaria*, *Cappadocia*, *Mauritania*, *Gethilia*, *Catalonia*, &c. Of Cities, *Algiers*, *Valencia* in *Spaine*, *Trabezond*, *Urbine*, *Vienna*, *Frankford* upon *Oder*.

Countries under ♒ *Aquary*.

Muscovia, the South part of *Swethland*, *Westphalia Piemont*, part of *Bavaria*, &c. Of Cities, *Hamborough*, *Breme*, *Mounteferate*, *Trent*, *Saltzburgh*, *Ingolstade*, *Pisaurum*, &c.

And whosoever hath the *Sunne*, *Moone*, part of Fortune Ascendant or Mid-heaven, in 10. 11. 12. 13. or 14 degrees of any of these Signs in his Nativity, or the Revolution thereof, shall suffer under the influence of this Eclipse. There hath been two Eclipses already in this Signe the last yeare; one of the *Moone*, the last of *January*, in 23 degrees of *Leo*: The other of the *Sunne*, the 11 of *August*, in 28 degrees of *Leo*. And now the third time, this other on the 21 of *January*, of the *Moone*. Three Eclipses within the space of a yeare.

Mars Lord of his Eclipse, in 25. degrees of *Capricorne*, will no doubt poure forth his Influence upon the people and places subiect to the sayd Signe, and that first Quadrangle which is ♈ ♑ ♎ ♋. Amongst many places under these, *Oxford* happens to be one. If Mr. *Wharton*, or *Naworth* the prime Calculators there, and their companion *Aulicus*, and others of their wicked Society chance to be there, when this Lunar Eclipse operates, they will curse their Ascendants, and their Starres that brought them to such an unfortunate place. But I trust in God (before that time, it will bee in better hands than

FINIS.
